Languages: French (native) · English (fluent) · Spanish (advanced; Central/South America, Spain)

Summary

I build products and help teams adopt AI. At GLS: a Claude Code and Copilot plugin used by more than 30 developers, and an AWS MCP server. Railora (founder): iOS app on the App Store with several thousand users and a public MCP server. Freelance since 2015, with 7 years in product teams in France and Canada (2 years in English-speaking teams). Hands-on accessibility: WCAG AA, EAA audit, VoiceOver, NVDA.

Skills

Languages	TypeScript, JavaScript, Java, Go, Swift, Dart, PHP, Python, SQL
Frontend	Vue 3, Nuxt, React, Next.js, Web Components, Tailwind; WCAG AA, ARIA
Back end	Node.js, NestJS, Spring Boot, Symfony, REST, GraphQL, microservices
DevOps	AWS, Terraform, Docker, Kubernetes, GitLab CI/CD, GitHub Actions, Cloudflare, Grafana
Mobile	SwiftUI, Live Activities, React Native, Flutter
AI	MCP, LLM, RAG, agents, guardrails, LangGraph; Claude Code, Copilot, Codex
Testing	Vitest, Jest, Cypress, Playwright, Cucumber, Postman; JUnit 5, Mockito; go test, testify

Product

Founder · Railora · railora.app **May 2026 – present**

- iOS live train tracker on the App Store with several thousand users, built solo from market study to production
- Public MCP server (mcp.railora.app, 5 tools): live trains and TGV MAX seats in Claude and ChatGPT
- SwiftUI, Live Activities; serverless Cloudflare backend; timetables for 11 countries, real-time on 8 networks

Experience

GLS France · Parcel logistics

Backend Engineer + AI adoption, Contractor **Aug 2026 – Oct 2026**

France, full remote

- Shared plugin for Claude Code and Copilot (skills, commands, guardrail hooks) used by more than 30 developers; trained the teams and took part in the architecture of the internal RAG
- AWS MCP server added to the plugin, with guardrail hooks on tool calls
- Cut releases from ~90 to 30-45 min with dedicated commands (code review, MRs, AWS)
- Java and Go microservices for an AI-camera pipeline that measures truck fill rate, and operational dashboards on the data

Lead Full-Stack Developer, Contractor **Nov 2024 – Mar 2025**

Toulouse · tracking app, 2.2M visits a month (client figure)

- Led the Vue 3 / TypeScript front end, mentored a trainee; EAA / WCAG audit, NPS and tracking pages made WCAG compliant with the design-system team
- Go PIN-code service from design to production; Java service sending PINs by email and SMS through SQS
- GitLab CI/CD, Terraform on AWS, Grafana dashboards; architecture meetings and specs

Frontend Developer, Contractor · Vasco **Jun 2025 – Jul 2026**

Fintech SaaS for private asset management (Vue 3, GraphQL, Symfony)

- Frontend best practices: TypeScript error baseline with pre-commit hook, Vitest unit tests and CI, composables, GraphQL conventions, security
- Real-time AG Grid data grid with GraphQL/Apollo: server-side filtering, live cache synchronization
- Contribution to the KYC module (AML/CFT form builder, Symfony backend) and front end of an LLM-powered KYC automation
- Full layout redesign and design-system components (tooltip, dropdown), built to WCAG AA / EAA

Full-Stack Developer (Vue.js & Java Spring Boot) · Bell Canada **Sep 2022 – May 2024**

Self-Service Center, Montreal · B2B and B2C microservices platform · international work program (V.I.E.) · in English

- Every new feature built to WCAG AA (AAA when possible), tested with VoiceOver and NVDA alongside QA; Figma designs reviewed with the design-system team
- Built the front end of the redesigned B2B web app for Bell's business clients (employee plans, phones, support, usage and expenses), then a fiber-installation tool; Java microservices
- Set up Cypress end-to-end and Jest unit tests; OpenShift and Azure

Full-Stack Developer · Occitaline **Oct 2019 – Aug 2022**

Industrial networking for building management, Toulouse · apprenticeship · Linux routers deployed at CNES (including the Ariane launch pads) and the Stade de France; product built from A to Z

- Web app and API (Node.js, MongoDB, Vue) driving the router end to end, from the UI to Linux scripts: firewall, routing, VPN
- Linux administration: scripting, IP routing, netfilter/iptables firewall; C driver development
- Unit tests and GitLab CI/CD; technical demos to clients

Other experience

Full-Stack Developer, Contractor (part-time) · InnoSelect **Sep 2024 – Nov 2025**

- Took over and extended, solo, an HR assessment platform: React/Next.js front end, NestJS/MongoDB API
- Scoring engine (68 competencies) with tests; PDF reports
- EN/NL interface; new front-end features built to WCAG

Frontend Developer (V.I.E.) · Pomerleau **Jun 2024**

- ArcGIS Experience Builder widget in React/TypeScript, delivered solo in 3 weeks
- FR/EN guides and a 4-hour training in English

Self-Employed Full-Stack Developer **2015 – present**

- Websites, web and mobile applications, APIs and custom algorithms; Chrome extension in TypeScript
- Security audits and penetration tests of web applications, under NDA

Selected projects

- **Remote door and gate opener (2025):** opens the building door and gate from the phone: ESP32 firmware in C, Go backend, Raspberry Pi behind a WireGuard VPN
- **Easy Router (2024):** Raspberry Pi travel router with VPN and a Vue 3 / TypeScript interface, to work abroad without exposing personal or client data
- **Max-Explorer (2024):** free TGV MAX seats and routes from SNCF open data (Nuxt, PostgreSQL, cron)

Education and certifications

Epitech · Master's degree, Software Architecture · graduated 2022

CodinGame · JavaScript 770/790 (2022)
